

Findscape Asset Handoff

A production-ready prompt and export contract for the first Cocos Creator hidden-object asset batch.

PROJECT	Findscape Cocos Demo
VERSION	1.0 · 13 July 2026
PRIORITY	Batch A first: world map + five target sprites
DELIVERY	Separate PNG assets + review contact sheet

Start with Batch A only. The clean map and target sprites must remain separate runtime assets.

1. How To Use This Handoff

Give this PDF to Claude Design. Paste the master prompt below with the PDF attached. Ask for a Batch A contact sheet first, approve the visual family, then request separate production exports. Continue to Batch B and Batch C only after the previous batch is accepted.

Master Prompt

You are the visual design and asset production partner for Findscape, a cozy mobile hidden-object game built with Cocos Creator. Read the full attached handoff before producing anything. Work in three reviewable batches and begin with Batch A only. Maintain one cohesive visual language: cozy hand-drawn casual game art, soft rounded lines, friendly multicolor palette, clean silhouettes, gentle texture, and strong readability on a phone. The audience is 15-35 and the experience should feel calm, playful, polished, and low-pressure.

The game map is the main playable surface. Do not bake HUD, labels, target objects, watermarks, signatures, or generated text into the clean map background. Target sprites must be separate transparent PNG assets so the runtime can position and animate them. UI mockups are implementation references; export reusable visual components separately whenever possible.

Follow the exact canvas sizes, transparency requirements, filenames, and safe-area rules in this handoff. Do not combine multiple requested runtime assets into one image unless explicitly called a reference sheet. Avoid photorealism, 3D rendering, heavy gradients, muddy monochrome grading, harsh black outlines, sharp aggressive forms, visual noise, illegible micro-detail, and copyrighted characters or brand marks.

For each batch, first show a cohesive contact sheet for review. After approval, export each deliverable separately at the specified dimensions. Include a short note listing deviations or design decisions. Start now with Batch A: World and Core Targets.

2. Product And Visual Context

Findscape is a reusable hidden-object game foundation. One large landscape map is panned and zoomed behind a compact portrait-mobile HUD. The runtime places, highlights, removes, animates, and scores separate target sprites.

Five reusable target categories

- Pineapple: classic hidden-object find.
- Balloon: visible tap-to-pop variant.
- Thief: cute tap-to-catch character variant.
- Puppy: friendly hidden-object variant.
- Gem: higher-difficulty hidden treasure.

Desired visual system

- Cozy hand-drawn illustration with soft, confident linework.
- Balanced multicolor palette: leafy green, sky blue, coral, sunny yellow, berry red, lavender, and warm neutrals.
- Rounded simplified forms, gentle authored texture, readable local contrast.
- Strong silhouettes at 48-96 px; calm, playful, polished, and low-pressure.

Hard exclusions

- No photorealism, glossy 3D, anime rendering, pixel art, or flat corporate vector style.
- No dark mood, weapons, threatening crime imagery, copyrighted characters, or brand marks.
- No heavy gradients, neon bloom, hard black outlines, fake text, watermarks, or signatures.
- No baked HUD or targets in the clean map; no checkerboard baked into transparent assets.

3. Batch A - World And Core Targets

Batch A blocks runtime art integration. Generate and review it before all other assets.

A1. Clean Demo Cozy Town Map

Filename: source_map_demo_cozy_town_placeholder_YYYYMMDD_01.png
Canvas: 2400 x 1600 px · opaque PNG · landscape

Create a cozy town park and street market with distinct regions: produce market and cafe frontage, central square or fountain, park and picnic area, small shopfronts, trees and planters, benches, baskets, awnings, windows, text-free signs, blankets, crates, and small props. Distribute at least 30 plausible hiding places across the full map while preserving visual paths and mobile readability.

The clean map must contain none of the five gameplay targets: no pineapple, free-floating balloon, sneaky thief, hidden puppy, or loose gem.

Runtime composition anchors

Target	Coordinate	Nearby context
Pineapple 1	420, 980	Produce stall, basket, patterned market props
Puppy	720, 1340	Bench, blanket, planter, low garden
Balloon 1	980, 360	Open sky gap, awning, festival string
Thief	1320, 840	Kiosk, alley, crates, central crowd gap
Pineapple 2	1670, 1160	Cafe table, fruit display, shopfront
Gem	1880, 1380	Fountain, flower bed, drain, stonework
Balloon 2	2040, 520	Canopy gap, awning, lamp post

Coordinates use the top-left of the 2400 x 1600 image. They guide composition only; never paint targets into the clean map.

A2. Five Separate Target Sprites

Export each as a separate 512 x 512 px transparent PNG. Center each object with moderate padding, preserve a complete silhouette, and match the map's linework, lighting, and texture.

Filename	Direction
source_target_pineapple_YYYYMMDD_01.png	Natural pineapple; leafy crown; yellow-green contrast
source_target_balloon_YYYYMMDD_01.png	Rounded coral/berry balloon; short soft string; no glossy 3D
source_target_thief_YYYYMMDD_01.png	Cute sneaky character; cap/mask/satchel; harmless; no weapon
source_target_puppy_YYYYMMDD_01.png	Friendly small puppy; crouched or peeking pose; simple face
source_target_gem_YYYYMMDD_01.png	Rounded soft facets and sparkle; teal/berry/violet; not sharp

Batch A acceptance

- Map reads both as a whole and at 2x zoom, with at least 30 hiding positions.
- True alpha transparency on targets; no floor patch, tile, frame, text, or watermark.
- Targets remain recognizable near 64 px and look native when composited on the map.
- Categories differ by silhouette, not color alone.
- Provide one review-only composite placing all targets at the seven anchor points.

4. Batch B - Icons And Tools

After Batch A approval, export seven separate 256 x 256 px transparent PNG icons. These are simplified close relatives of target sprites. Keep consistent optical scale and safe padding. Do not bake circular button backgrounds.

Filename	Content
source_icon_pineapple_YYYYMMDD_01.png	Simplified pineapple
source_icon_balloon_YYYYMMDD_01.png	Simplified balloon
source_icon_thief_YYYYMMDD_01.png	Cute thief portrait/silhouette
source_icon_puppy_YYYYMMDD_01.png	Puppy portrait/silhouette
source_icon_gem_YYYYMMDD_01.png	Simplified gem
source_tool_hint_YYYYMMDD_01.png	Lightbulb or gentle sparkle beacon; no text
source_tool_magnifier_YYYYMMDD_01.png	Clear magnifying glass; no text

Batch B acceptance

- Readable at 32-48 px.
- Consistent visual weight, padding, and transparent backgrounds.
- Hint and magnifier are distinguishable without labels.

5. Batch C - HUD And Feedback

C1. Portrait HUD Reference

Filename: source_ui_hud_reference_YYYYMMDD_01.png

Canvas: 1080 x 1920 px · opaque PNG

Show the Cozy Town map as the dominant full-screen play surface. Use a compact safe-area-aware top HUD for time, score, and combo; a compact bottom target list with icons and remaining counts; and small hint/magnifier controls near the lower corners. Keep touch targets at least 88 source pixels. Numeric placeholder text is acceptable only to show hierarchy.

This is an implementation reference, not a landing page, phone mockup, poster, or card-heavy concept board. The map must remain visibly playable.

C2-C6. Feedback Reference Sheets

Export each as a separate 1024 x 1024 px transparent PNG. Show 3-5 separated key states without baked labels. Effects must be feasible with sprites, particles, scale, opacity, and simple tweens.

Filename	States / tone
source_feedback_find_success_YYYYMMDD_01.png	Soft ring, sparkles, lift/fly cue · 700 ms
source_feedback_pop_success_YYYYMMDD_01.png	Rounded burst and soft puff · 500 ms
source_feedback_catch_success_YYYYMMDD_01.png	Friendly capture stamp shape; no text · 800 ms
source_feedback_hint_reveal_YYYYMMDD_01.png	Pulse/spotlight that does not cover target · 2000 ms
source_feedback_wrong_tap_YYYYMMDD_01.png	Subtle ripple/wobble; avoid harsh red · 300 ms

6. Export Package Contract

Return selected outputs in three folders:

batch_a_world_targets/ batch_b_icons_tools/ batch_c_ui_feedback/

Use exact filenames, replacing YYYYMMDD with the export date. Use _01, _02, etc. only for deliberate alternatives. Never use final, new, copy, or v2.

Every batch includes

- A separate PNG for every requested asset.
- A review contact sheet or composite.
- A short plain-text decision note listing palette, line treatment, deviations, and open questions.
- Layered source is welcome but not required for the first review.

Final production checklist

- Exact filenames and dimensions.
- Real alpha transparency where required.
- Clean map has no gameplay targets or HUD.
- No watermark, signature, brand, fake text, or copyrighted character.
- No clipped target silhouette; all assets share one visual family.
- Icons remain legible on mobile; portrait controls respect safe areas.
- Review sheets are identified in the delivery note, not with baked image labels.

7. Development Intake

The development team will preserve selected source exports under design/claude-design/source/{assetId}/ and normalize approved files into stable Cocos runtime paths. Semantic asset IDs must not be renamed.

Asset role	Runtime example
Map	art/maps/demo_cozy_town_placeholder
Target	art/targets/target_pineapple
Target-list icon	art/icons/icon_pineapple
Tool icon	art/icons/tool_hint
Feedback reference	art/feedback/feedback_find_success
